# Exchanges

## Classical Exchanges

# How it works

01

Sign Up

Give them your name,  
Picture,  
And sometimes even ID

02

Funds

Send them your funds  
Give them your private  
keys

03

Trade

Trusted 3de party  
structure.

# How We Looked At The Model

## Strengths

With their trusted 3de party structure, they ensure that you are not screwed over

## Weakness

There is a lot of personal data, like private keys, and ID, that they need.

## Opportunity

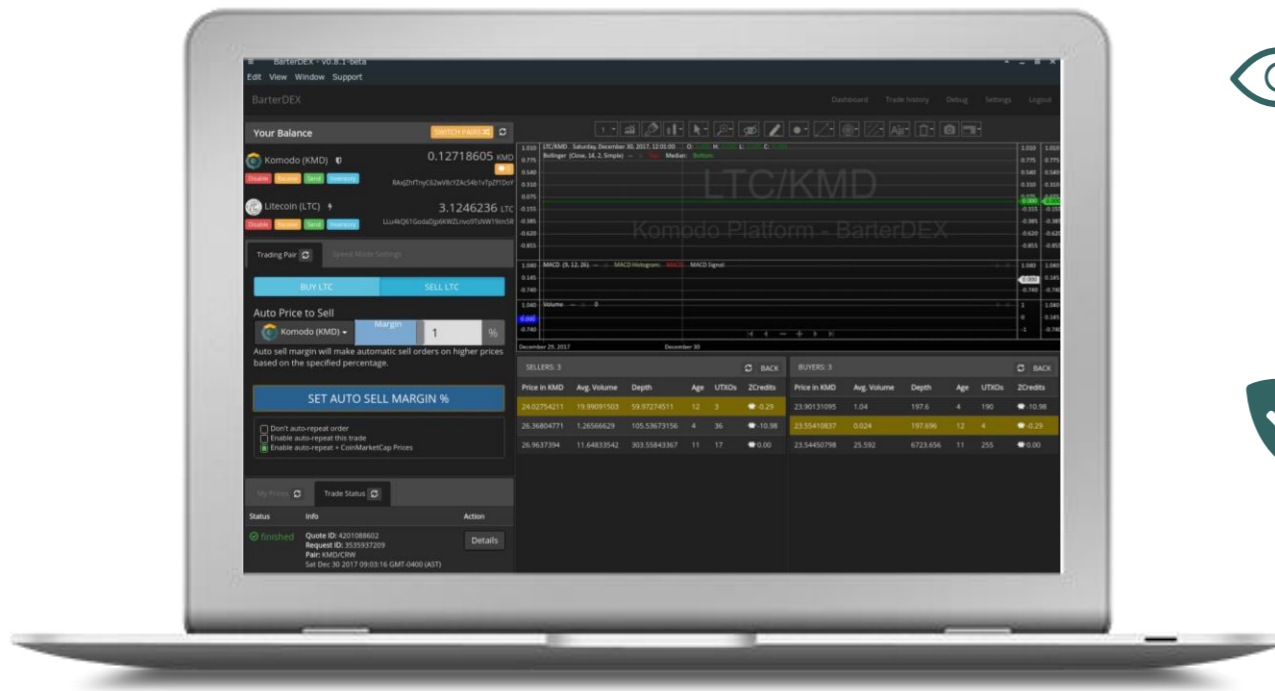

This is thus an opportunity to improve for us. Can we make a platform that is trust less & without the personal information breach

## Improve

A decentralised trading platform, that uses cutting edge Atomic Swap Technology.

The Komodo Platform presents

# BarterDEX

**Absolute Privacy**  
You can just add a account like creating a wallet address. No need to give your ID to anybody.

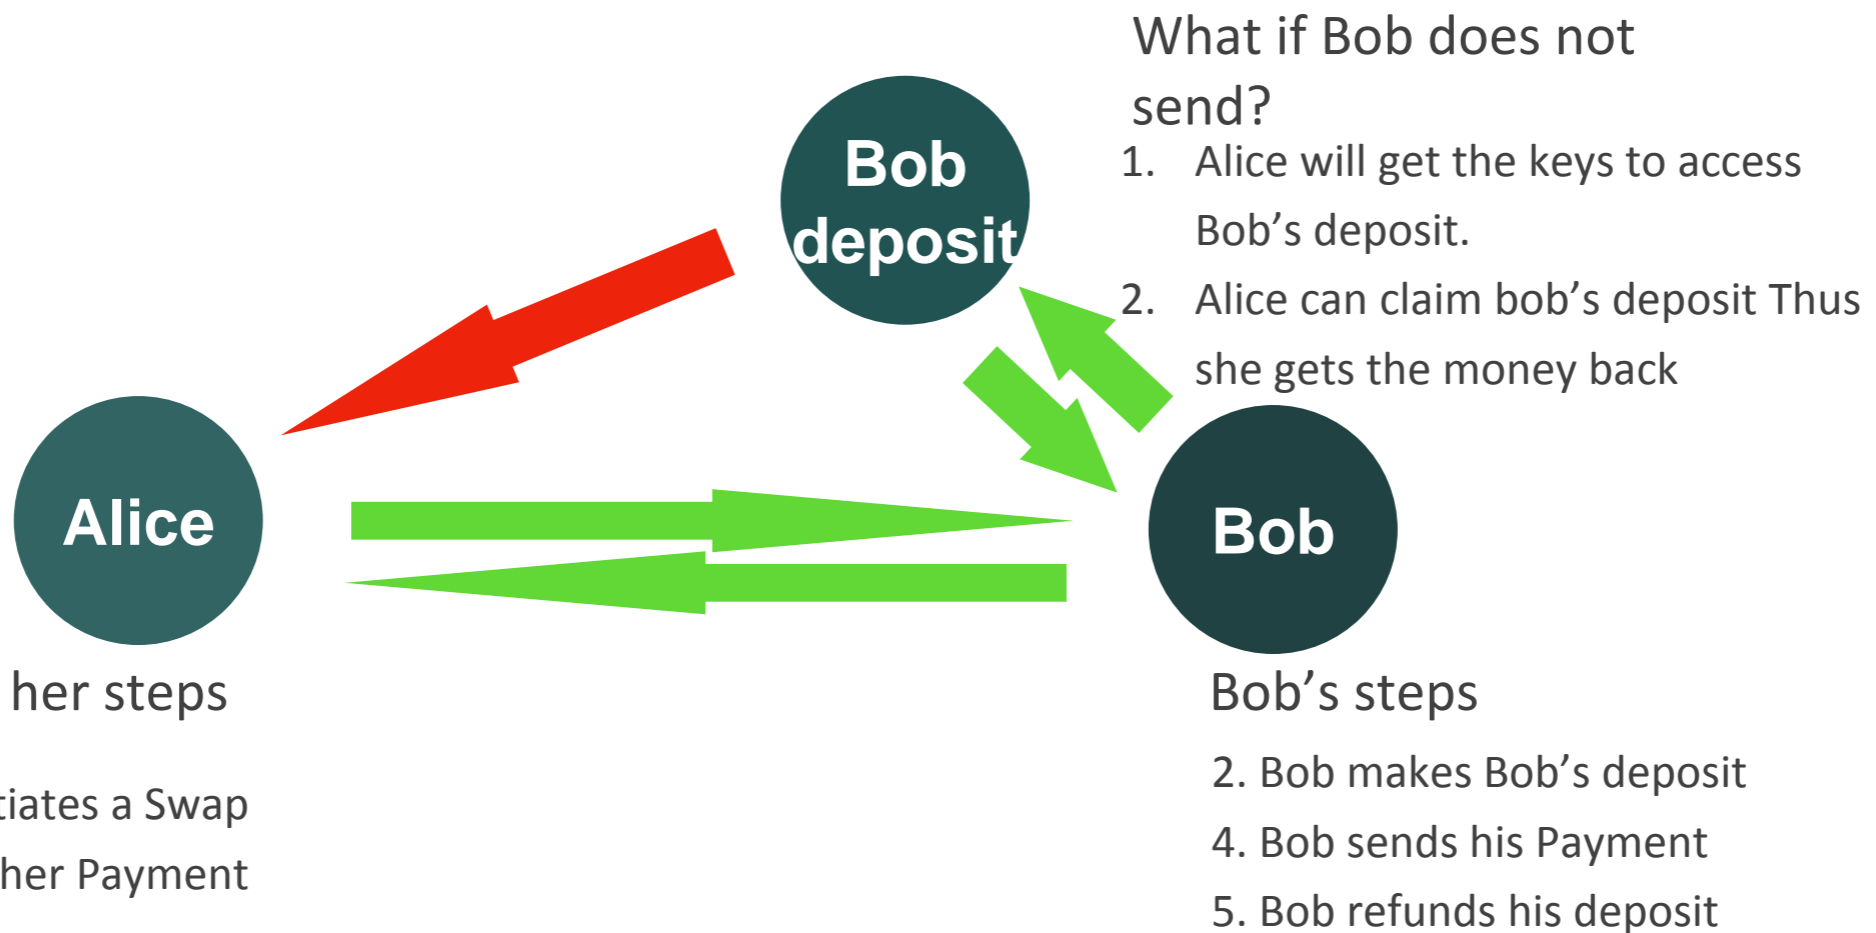

**Decentralization**  
Made government-proof secure and worldwide with decentralisation.

**Security**  
How do we still ensure the security of the trade, if the normal exchanges needed the funds to ensure this?  
The Atomic Swap

# The Atomic Swap

What is our purpose

# What makes the Komodo Platform

## security

---

Decentralisation to ensure the government-proofness of the Exchange.

## freedom

---

Anybody, anywhere, can trade one of the 85+ coins that are supported on the exchange. Any coin is added for free if it meets the technologic demands.

## privacy

---

You don't have to give your ID or private keys.

**Now a Demo of the  
BarterDEX**

# AMA & a happy evening
